

Refrigerator - freezer

USER'S MANUAL

MODEL: HD-413FW

◇ Structure Illustration

The sample cutline is representation of this series of refrigerator, which have similar structure and different capacity .

		HD-363FW	HD-413FW	HD-443FW
1	Freezer temperature control knob	1	1	1
2	Freezer compartment shelf	1	1	1
3	Refrigerator temperature control knob	1	1	1
4	Lamp switch	1	1	1
5	Refrigerator compartment shelf	2	3	2
6	Vegetable bin	2	2	2
7	Freezer door rail	2	2	3
8	Simple rack(short)	3	3	3
9	Simple rack(long)	1	1	1
10	Adjustable feet	2	2	2

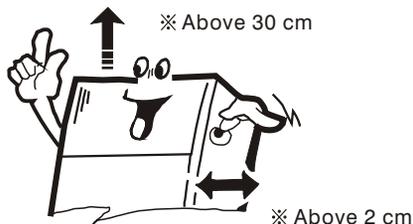

PS: If we change some small parts of the refrigerator, it is for you to use it more conveniently. Sorry for no giving notice.

2、Instructions for installation

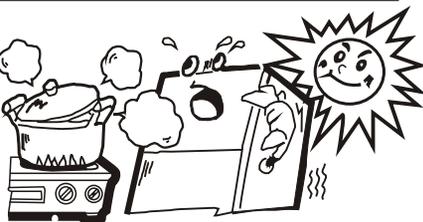

1. Install on a completely flat and rigid surface. Level the refrigerator by rotating the leveling Legs located at the front two corners. The refrigerator is then securely positioned.

2. Leave at least 2 cm between both sides of the refrigerator and the wall, and at least 30 cm between the top of the refrigerator and the surface immediately above, so that the refrigerator will not touch any of the surrounding surfaces.

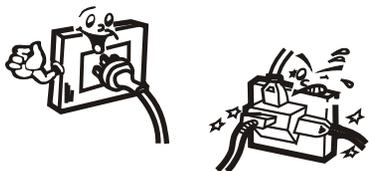

3. Choose a location which is not exposed to sunlight, relatively free from dust, heat and humidity, and offers good ventilation.

3. Cautions for Safety

1. The power plug should have its own socket, as adapter may cause the socket to overheat.

2. Don't store inflammable materials such as ether, benzene, LP gas and glue etc in the refrigerator.

3. The appliance is not intended for use by young children or infirm persons without supervision; Young children should be supervised to ensure that they do not play with the appliance.
4. If the supply cord is damaged, it must be replaced by a special cord or assembly available from the manufacturer or its service agent.

3. Cautions for Safety

5. WARNING---The customer don't allow to replace or repair the power cord and plug privately, only trained and qualified service personnel should repair or service refrigerator equipment.

6. Don't splash water on the refrigerator, for this may cause malfunction or electric shock.

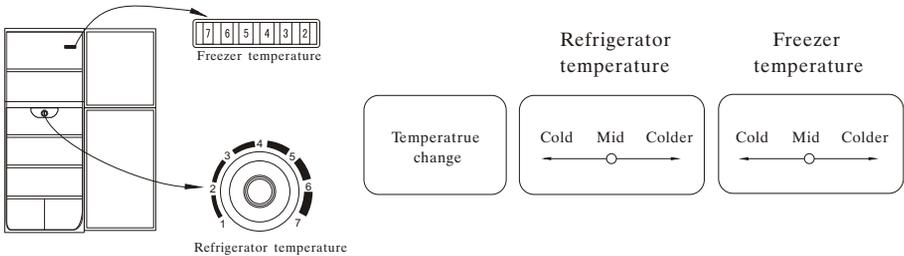

7. When gas leaks from its container, don't pull the plug, out or in, for it may arouse sparks and fire calamities.

4. Usage Instructions

1. Temperature adjustment . . . Usually in Mid position

Temperature knob is to be adjusted temperature of refrigerator and freezer. Normally, You could place the knob at Mid position. Please turn the knob on the number " 8" if the user rapidly freezes the food. After freezing, please turn the knob on the "figure".

4. Usage Instructions

2.Freezing

Meats frozen freshly can help maintain their nourishment.

3.Refrigeration

- Fruits, vegetables are to be stored in vegetable case. Wrap them with fresh preservation paper to avoid drying.

- Foods with rich water substance such as bean curd and vegetable should be stored in the front bottom part of the refrigerator compartment to avoid being frozen.

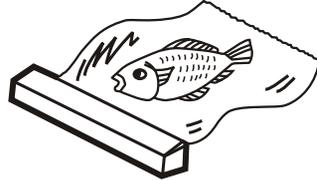

4.Placement of food

- There should always be some space between food to maintain cold air circulation.

- Food should be wrapped tidily to avoid them from becoming dry and with odour.

- Hot foodstuffs should be cooled down before being placed in the compartments. Otherwise the internal temperature of the compartments or electric consumption will increase.

5. Automatic defrosting

Complete automatic defrosting process is adopted to the design of this refrigerator to make gas usage of the product hastles free.

5. Cautions for Use

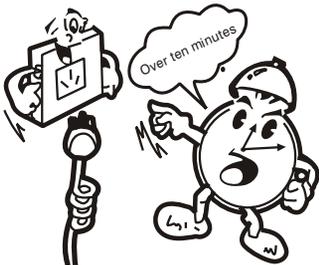

1.The more food stuff is put in the refrigerator or the more frequent and the longer the doors are opened, the more the electric consumption will be, intimately even leading to malfunction.

2.It is better not to place objects which are too heavy, pointed or are corrosive on the refrigerator .

3. Only replug the electric power after an interval of over ten minutes.

4. Don't store bottled drink in the freezer, so as to prevent them from being broken .

5.Open the doors as less as possible during power supply breakdown.

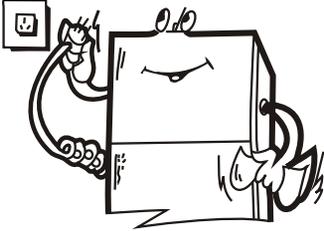

6.Don't touch food or containers in the interior compartment with your wet hands so as to prevent frost.

6. Maintenance

1. While cleaning the refrigerator, pull out the electric power plug, rub carefully with a piece of cloth soaked with natural cleanser then wipe with clean water.

2. Cleansers such as soap powder, abrasive cleaning powder, alkali cleansers, chemical cloth, thinner, alcohol, acid petroleum product and hot water should not be used to clean the refrigerator as they may damage the painted cover and plastics.

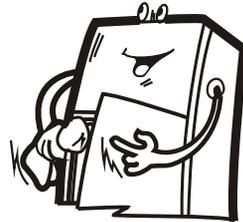

3. The drain pan should be cleaned at least once a year.

4. If the refrigerator is out of use for a long time, please pull out the plug, clean and dry the interior compartment, then close the doors tightly.

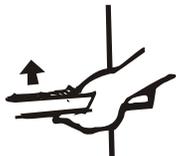

5. As the door gasket is easy to be dirtied and fogged, so clean it frequently.

7. Installing and Removing the Accessories

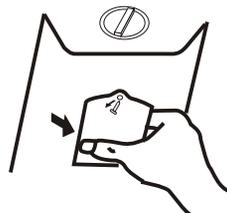

1. To dismantle the slide shelf, pull it straight upward levelly. Installing it just in the opposite way.

2. If you need to replace the lamp, please according to the below instruction,

- (1) Pull out the power plug first,
- (2) Aim at the bolt or a screw. Screw the bolt loose by tools.
- (3) Hold both sides of the lamp-chimney, take it out following the arrowhead direction in the photo,
- (4) Unscrew the old lamp; replace the new lamp,
- (5) Install the lamp-chimney again.

Note: the lamp power is 10W.

8. The following cases are not malfunctions

1. The sides of the refrigerator heat up while the condenser is working, but this will not influence storage performance.

2. It takes a span of time for the temperature of the freezer and refrigerator compartments to become cold while the refrigerator is working: If the temperature of the two compartments is higher while the refrigerator is working, it takes a span of time for the temperature of the two compartments to decrease.

3. The surface of the compressor becomes hot: It is normal for the surface of the compressor to get hot in good working condition. Don't touch it with your hands.

4. When you hear a sound like water flowing:

The sound like water flowing is actually the refrigerant (cooling gas) flowing. It does not indicate a malfunction.

5. When condensation forms on the outside of the refrigerator:

Condensation may form on the outside when the humidity is high e.g. during a wet season. This is the same as when ice water is poured into a glass. It does not, therefore, indicate a failure. Wipe the surface dry with a dry cloth.

9. Trouble Shooting

If any case of malfunction happens, please inspect and dispel it according to the methods shown in the following table:

Situation	Inspection
Not refrigerating	Check if there is a power failure. Check if the power cord is plugged into the power outlet. Check that the fuse (or circuit-breaker) has not blown.
Not cooling sufficiently	The food may be packed too tight together which block the flow of cool air. You may have put in something hot or a lot of foodstuffs into the refrigerator. The temperature control dial may not have been set properly. The door may not have been closed properly. The door gasket may be damaged. The refrigerator may not be well ventilated. There may be insufficient space between the refrigerator and the surfaces immediate to the sides and top.
Foods frozen in the refrigerator compartment	Have the temperature controls of the compartment and small case been set to "colder" position? Is the normal surrounding temperature below 5°C? Have the foodstuff been put too crowdedly?
Water leaks from refrigerator compartment	Is the drainage pipe blocked? Is there any leakage from some objects stored in it?
Noises	Is the refrigerator installed firmly? Has the refrigerator been struck by some other objects?
Compressor does not stop working automatically	Is the food stored too much at one time? Are the doors opened too frequently or too long? Are the temperature controls of freezer and refrigerator compartments set to "colder" position?

If the above methods does not solve the problem, please contact the service centres for assistance without any delay.
